

SGNIA Real Estate - Documentación Técnica y Manual de Comandos

Informe técnico integral, arquitectura de software, consumo de APIs, seguridad, guía detallada de comandos ejecutados y código fuente del proyecto.

1. Ficha Técnica del Proyecto

Nombre del Sistema:	SGNIA Real Estate (Portal Inmobiliario Geolocalizado)
Zona de Cobertura:	Nopalucan de la Granja, Puebla, México (19.215050, -97.817920)
Arquitectura:	Modelo-Vista-Controlador (MVC) en Framework Laravel 11
Estilo Visual:	Monocromático Gris Slate (#0b0f19), Minimalista y Alto Contraste

2. Stack Tecnológico

Capa / Módulo	Tecnología	Propósito Principal
Backend	PHP 8.4 / Laravel 11	Lógica de negocio, controladores, routing, ORM Eloquent y auth
Base de Datos	MySQL / SQLite	Persistencia relacional de inmuebles, usuarios, leads y transacciones
Frontend	TailwindCSS / Vite	Interfaz de usuario responsiva en modo oscuro Gris Slate
Mapas Satelitales	Leaflet.js + Esri API	Renderizado de vista satelital HD interactiva y marcadores GPS
Meteorología	OpenWeatherMap API	Consulta asíncrona (AJAX) del clima en tiempo real en Nopalucan
Pasarela de Pagos	PayPal JS SDK	Cobro digital de apartados en pesos mexicanos (\$ MXN)

3. Ubicación Exacta de las APIs en el Código

A. API de Mapas Satelitales (Esri World Imagery & Leaflet.js):

- Ruta Laravel: routes/web.php ➔ `Route::get('/api/properties', [PropertyController::class, 'apiIndex']);`
- Controlador: app/Http/Controllers/PropertyController.php ➔ Método `apiIndex()`
- Consumo Frontend: resources/views/properties/index.blade.php (Línea de capa Esri HD)

B. API Meteorológica en Tiempo Real (OpenWeatherMap):

- Credenciales: config/services.php (Sección 'openweather') y archivo .env
- Ruta Laravel: routes/web.php ➔ `Route::get('/api/properties/{property}/weather', ...);`
- Consulta HTTP Backend: app/Http/Controllers/PropertyController.php ➔ Método `apiWeather()` usando `Http::get()`
- Widget Frontend: resources/views/properties/show.blade.php (Renderizado mediante Fetch AJAX)

C. API de Pasarela de Pagos (PayPal JavaScript SDK):

- Credenciales Client ID: config/services.php (Sección 'paypal')
- Carga de SDK: resources/views/leads/receipt.blade.php ➔ `https://www.paypal.com/sdk/js?client-id=...¤cy=MXN&locale=es_MX`
- Procesamiento Servidor: app/Http/Controllers/LeadController.php ➔ Método `processPaypalPayment()`

4. Matriz de Roles y Flujo Comercial

- **Administrador General (admin):** Control total, aprobación/revocación de Agentes (*is_approved*), publicaciones e inspección de solicitudes.
- **Agente Inmobiliario (agent):** Registro sujeto a aprobación previa del Admin, publicaciones geolocalizadas y atención a prospectos.

• ■ **Cliente / Comprador (buyer):** Exploración satelital, envío de consultas, sección '**Mis Apartados**' y pago en línea con PayPal.

5. Manual de Comandos Ejecutados en el Proyecto

A continuación se detallan todos los comandos CLI utilizados durante el desarrollo, despliegue y pruebas del proyecto, explicando la función exacta de cada uno:

Comando CLI	Categoría	Explicación y Propósito Técnico
git pull origin main	Control de Versiones	Descarga e integra las últimas actualizaciones y archivos del código fuente desde el repositorio remoto en GitHub hacia el servidor o equipo local.
php artisan migrate:fresh --seed	Base de Datos	Elimina todas las tablas existentes en la base de datos (<i>fresh</i>), reejecuta todas las migraciones estructurales y corre los <i>Seeders</i> para repoblar la base de datos con información inicial de prueba (usuarios, inmuebles y mensajes).
php artisan storage:link	Archivos del Sistema	Crea un enlace simbólico entre el directorio privado <i>storage/app/public</i> y el directorio público <i>public/storage</i> , permitiendo que las fotografías subidas o de muestra sean accesibles públicamente desde el navegador web.
php artisan serve --port=8000	Servidor Web	Inicia el servidor web embebido de desarrollo de Laravel escuchando peticiones HTTP en el puerto 8000 (utilizado en entornos locales o AWS Cloud9).
php artisan route:list	Diagnóstico Laravel	Despliega en consola el listado completo de todas las rutas HTTP registradas en la aplicación (<i>routes/web.php</i>), sus verbos (GET, POST, DELETE), URLs, middlewares aplicados y controladores responsables.
php artisan test	Pruebas Automatizadas	Ejecuta la suite de pruebas automatizadas del proyecto (PHPUnit/Pest), verificando la respuesta de endpoints, controladores, modelos y middlewares antes de subir a producción.
git status	Control de Versiones	Muestra el estado actual del árbol de trabajo en Git: archivos modificados, creados, eliminados o pendientes por incluir en la siguiente confirmación.
git add .	Control de Versiones	Agrega todos los archivos modificados o creados en el directorio actual al área de preparación (<i>Staging Area</i>) para ser guardados en el siguiente commit.
git commit -m "..."	Control de Versiones	Guarda una captura/confirmación del estado del proyecto en la historia de Git local, etiquetada con un mensaje descriptivo de las mejoras realizadas.
git push origin main	Control de Versiones	Sube y sincroniza todas las confirmaciones (commits) locales realizadas hacia la rama principal <i>main</i> del repositorio remoto en GitHub.
pip install reportlab	Entorno Python	Instala la biblioteca ReportLab en el entorno Python para la compilación y maquetación automatizada de este documento PDF.

6. Código Fuente Íntegro del Proyecto
